

## ABSTRACT OF THE DISCLOSURE

The invention relates to pliers for cutting plastic tubes comprising a first lever (1) provided with grooves (41, 42, 43) having different widths for receiving tubes of corresponding diameters and a second lever (2) holding a blade (5). Said levers are pivotally arranged with respect to each other around a pivot axis (3). The first lever (1) is provided with a wheel (4) provided with the grooves (41, 42, 43) which are embodied on the periphery thereof in such a way the groove selected for a tube diameter is placeable in front of the blade (5), thereby rotating the wheel (4) to a corresponding position.
